

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

A
CLASSIFIED INDEX
TO THE
TRANSACTIONS, PROCEEDINGS,
AND
QUARTERLY JOURNAL
OF
THE GEOLOGICAL SOCIETY OF LONDON:

SECOND EDITION,
INCLUDING ALL
THE MEMOIRS AND NOTICES TO THE END OF 1868.

BY
GEORGE WAREING ORMEROD, Esq., A.M., F.G.S.

LONDON:
PRINTED BY TAYLOR AND FRANCIS, RED LION COURT, FLEET STREET:
SOLD AT
THE APARTMENTS OF THE SOCIETY IN SOMERSET HOUSE.
MDCCCLXX.

ADVERTISEMENT
TO
THE SECOND EDITION.

IN this Edition the Index has been continued to the close of the Session of 1867-68, and the same general arrangement has been followed which was made in the prior publication, with the exception of a few alterations which, it is hoped, will render the Index more useful. The divisions II., III., and IV. have been moved to the end of the Systems to which they relate; in Section R, Physical Geography and Topographical and Practical Geology have been incorporated into one Subsection; and Section T is divided into nine Subsections, representing the chief branches of Palæontology. A list of the Presidents of the Society, with references to their Addresses, has been added.

G. W. O.

Chagford, Exeter,
December 1868.

PREFACE

TO THE FIRST EDITION.

THE first part of the following Index contains the titles of the Papers and Communications printed in the Publications of the Geological Society, including the "Translations and Notices of Geological Memoirs" given in the Second or Miscellaneous Part of the Quarterly Journal; these are classed according to Geological systems and groups (chiefly after the table in Lyell's 'Manual of Geology'), and under such other heads as appear to be needful, each division being distinguished by a letter or figure.

If the subject-matter of a paper relate to several divisions, the full title is, as a general rule, placed in each division; but where such mention of more than one division merely occurs as an illustration, or in explanation, and does not form an essential part of the paper, the title is not always repeated.

When several series or groups are referred to as a System, the title is generally placed under the System, and not repeated; and when all the series or groups of a System are mentioned in the same paper, a similar course is occasionally adopted: on this point it was found practically difficult to lay down a rule; and it will therefore be as well, in addition to searching the subdivisions, to examine that of the System also.

The Communications are placed in each division under the names of the Authors. These are arranged in alphabetical order, and the papers are placed under each name in the chronological order in which they were published. If a paper be a joint production, it is placed under the name of each of the Authors.

In some Papers (especially in those contained in the early volumes) the descriptions are of so very general a character that they have been placed in the class of "Topographical Geology."

As various changes have taken place in nomenclature or classification

since many of the Papers were published, in such cases a paper will generally be found both under the division to which it was formerly assigned and also in that to which it now belongs.

Where the views of different authors writing on the same subject do not agree, the papers are classed according to the opinion of each writer.

The "Index of Places" comprises, after the name of the place, that of the Author, and the letter or figure under which it will be found in the Stratigraphical Index, and the reference to the Transactions, Proceedings, or Quarterly Journal. This Index of names serves as a Geological Gazetteer; for the letters or figures point out the formations also.

The "Index of Authors" shows the formations and groups, or special subjects, on which each person has written; and also the names of the persons who have written on each formation or subject. It will necessarily, therefore, serve as a useful index in referring to memoirs, the asterisks in the columns indicating under what divisions in the body of the book the titles of the memoirs of the several authors are to be found, alphabetically arranged, with their references.

In a work of this nature it is impossible but that errors will be found, arising in transcription and from misconception of an author's views; these will, however, it is hoped, be remedied by the triple nature of the "Index."

The Compiler, in presenting this work to his brother Geologists, feels confident that they will not view with too critical an eye this labour of love,—the occupation of one winter's evenings, in a remote country town, with only his own limited library to assist in unravelling the many obscure points that occur in the publications of our Society.

G. W. O.
